Brandworkz 8.2.2 Release Notes

Reporting Improvements

The reporting dashboards have been optimised for speed and re-configured. Making them quicker and easier to report on information around key activity in your system. Below are some of the key improvements.

Quick Filters

All the dashboards come with auto-suggest filter dropdowns to narrow down results. These include, but are not limited to the following; User(s), Group(s), Assets, Workflow, Templates.

Speed Improvements

Significant speed improvements have been made to all dashboards to allow admins to obtain reporting results for over much longer time periods and export much larger datasets.

Asset Thumbnails

The asset dashboard now contains a thumbnail image within the results table.

Counts and Top 100's

Dashboards contain additional activity counts and top 100 tables to allow admins to quickly visualise popular areas of the system.

Users and Groups Dashboard

The new users and groups dashboard allows admins to get a better picture of how users and groups are interacting with the system. This will help admins to make better decisions on how to enhance the system for their users.

Web-to-Publish (W2P) Dashboard

The new web-to-publish dashboard provides detailed information on your dynamic templates and the resulting artwork produced from your end users.

Asset Specific Reports

Admins can access detailed reporting information on specific assets via the insights tab in the asset detail screen.

Improvements

- Improved SAML/SSO connection setup including automatic creation of metadata for ADFS.
- Ability to output some custom HTML/JS snippets in Masthead (e.g. for additional analytics).
- Ability to search on full names in the user admin area.
- Ability to apply 'Expiry Date' and 'Asset Title' to workflow assets from a form shown as part of a workflow stage.

Bug Fixes

- History point to search results asset detail screen.
- Fixed expiry date is not displaying correctly on the bulk edit screen.
- Fixed validation message on user create page.
- Labeling of asset status on search results.
- Fixed user listing sort by admin.
- Various bug fixes.
